

Sentry's Ecosystem

Sentry integrates seamlessly with your favorite apps and services.

Notify. Escalate. Fix. Deploy. Your workflow is just that — yours. And the freedom you have to integrate your own tools within your workflow is crucial toward your application's success.

By giving you the ability to build your own integrations, Sentry's ecosystem works with — not against — your existing workflow, all to help you achieve harmony between code and collaboration.

"Sentry.io is our tool of choice to diagnose and fix our code across 6 teams. Having it integrate seamlessly with Teamwork allows our developers triage issues and get bug fixes out to our customers faster."

Dan Mackey,
Co-Founder & CTO at Teamwork

PERMISSIONS	
Project Projects, Tags, Debug Files, and Feedback	No Access

Organization Manage Organizations, resolve IDs, retrieve Repositories and Commits	Read
Member Manage Members within Teams	No Access

Integration Platform

Ecosystem adapts to your workflow, not the other way around. If there's a tool unique to your workflow, we give you the ability to create a custom integration via our Integration Platform, without having to update your entire workflow to use it.

40+ Integrations (and Growing)

Jira. GitHub. Slack. If there's an industry-leading application, Sentry integrates with it. All integrations on our platform are first-class actors within Sentry, so your team can standardize your codebase with peace of mind.

Automate Everything

Get alerted via Slack or Microsoft Teams. Two-way sync issues between Sentry and Jira. Notify Sentry of releases from GitHub, Vercel, or Netlify. Changes are reflected everywhere automatically, keeping your whole team informed.
